

SPECIAL INTEREST GROUP:

Bridging Medical Informatics in Asia

We are hosting a one-day session at HGA2023 for medical informatics professionals in Asia. Our intention is to introduce the open data each country possesses and foster communication among researchers in the region. We aim to understand the biological mechanisms through which genetic variants influence phenotypes by utilizing genomic and multiomics information, as well as addressing challenges in elucidating the etiology of rare diseases in Asia.

DATE

AM 10:00-11:50, 14:00-18:00
Thursday, October 12

VENUE
