October 7 (Friday)

Room 4 Oct. 7 (Fri.) 8:00-8:50 E

**ML1 Potential cancer therapeutics targeting TGF- $\beta$ /Smad3 signaling**

Chairperson: Susumu Itoh (BioChem., Showa Pharm. Univ.)  
座長: 伊東 進 (昭和薬大・生命薬学・生化学)

**ML1 Potential cancer therapeutics targeting TGF- $\beta$ /Smad3 signaling**  
Seong-Jin Kim<sup>1</sup>, Eunjin Bae<sup>1</sup>, Jinah Park<sup>1</sup>, Mi-Kyung Kwak<sup>1</sup>, Kazuhito Naka<sup>2</sup>, Ooshima Akira<sup>1</sup> (<sup>1</sup>Nanobio Med. Res. Ctr., AICT, Seoul Natl. Univ., <sup>2</sup>Res. Inst. for Radiation Biol. & Med., Hiroshima Univ.)

Room 8 Oct. 7 (Fri.) 8:00-8:50 J

**ML5 From Real-time Tumor-Tracking Technology to Motion Science in Life**  
動体追跡技術から生体の動きの科学へ

Chairperson: Masahiko Miura (Tokyo Med. & Dent. Univ.)  
座長: 三浦 雅彦 (東京医歯大・院医歯・口腔放射線腫瘍)

**ML5 From Real-time Tumor-Tracking Technology to Motion Science in Life**  
Hiroki Shirato<sup>1,2</sup> (<sup>1</sup>Dept. Radiat. Med., Grad. Sch. Med. Hokkaido Univ., <sup>2</sup>Quant. Med. Sci. Eng., Glob. Inst. Res. Ed., Hokkaido Univ.)  
動体追跡技術から生体の動きの科学へ  
白土 博樹<sup>1,2</sup> (<sup>1</sup>北海道大・医・放医、<sup>2</sup>北海道大・国際連携・量子理工)

Room 5 Oct. 7 (Fri.) 8:00-8:50 J

**ML2 RUNX genes: Integral component of Fanconi-BRCA pathway**

Chairperson: Rieko Ooki (Natl. Cancer Ctr.)  
座長: 大木 理恵子 (国立がん研究セ・研・難治がん)

**ML2 RUNX genes: Integral component of Fanconi-BRCA pathway**  
Yoshiaki Ito (Cancer Sci. Inst. of Singapore, Natl. Univ. of Singapore)  
伊藤 嘉明 (Cancer Sci. Inst. of Singapore, Natl. Univ. of Singapore)

Room 9 Oct. 7 (Fri.) 8:00-8:50 J

**ML6 In situ Delivery and Production System (iDPS) to Target Hypoxia of Solid Cancers with Anaerobic Bifidobacterium**  
嫌気性ビフィズス菌を用いた固形がんの嫌気的環境を標的とする選択的・持続的抗がん物質の産生系

Chairperson: Shinae Kondoh (Sch. of Life Sci. & Tech., Tokyo Inst. of Tech.)  
座長: 近藤 科江 (東京工大・院生命理工・生体分子機能)

**ML6 In situ Delivery and Production System (iDPS) to Target Hypoxia of Solid Cancers with Anaerobic Bifidobacterium**  
Shun'ichiro Taniguchi (Dept. Comprehensive Cancer Therapy, Shinshu Univ. Sch. Med.)  
嫌気性ビフィズス菌を用いた固形がんの嫌気的環境を標的とする選択的・持続的抗がん物質の産生系  
谷口 俊一郎 (信州大・医・包括的がん治療)

Room 6 Oct. 7 (Fri.) 8:00-8:50 J

**ML3 In Memoriam: Alfred G. Knudson—Hereditary cancer & Environmental carcinogenesis—**  
Knudson 2 hit 45周年記念～遺伝性がんと環境発がん～

Chairperson: Akira Orimo (Dept. of Path. & Oncology, Juntendo Univ.)  
座長: 折茂 彰 (順天堂大・医・病理・腫瘍)

**ML3 In Memoriam: Alfred G. Knudson—Hereditary cancer & Environmental carcinogenesis—**  
Okio Hino (Dept. of Pathol. & Oncology, Juntendo Univ. Sch. of Med.)  
Knudson 2 hit 45周年記念～遺伝性がんと環境発がん～  
樋野 興夫 (順天堂大・医・病理・腫瘍)

Room 10 Oct. 7 (Fri.) 8:00-8:50 J

**ML7 Recent Advances in Liquid Biopsy**  
リキッドバイオプシー 最近の動向

Chairperson: Hidetoshi Tahara (Dept. of Cell. & Mol. Biol., Hiroshima Univ.)  
座長: 田原 栄俊 (広島大・院医歯薬保健・細胞分子生物)

**ML7 Recent Advances in Liquid Biopsy**  
Masaki Mori (Dept. of Gastroenterological Surg., Grad. Sch. of Med., Osaka Univ.)  
リキッドバイオプシー 最近の動向  
森 正樹 (大阪大・院医・消化器外科)

Room 7 Oct. 7 (Fri.) 8:00-8:50 J

**ML4 ASK family kinases in Stress Signaling and Cancer**  
ASKファミリーによるストレスシグナルとがん

Chairperson: Kohsuke Takeda (Dept. of Cell Reg., Grad. Sch. of Biomed. Sci., Nagasaki Univ.)  
座長: 武田 弘資 (長崎大・院医歯薬・細胞制御)

**ML4 ASK family kinases in Stress Signaling and Cancer**  
Hidenori Ichijo (Cell Signaling, Grad. Sch. Pharm. Sci., UTokyo)  
ASKファミリーによるストレスシグナルとがん  
一條 秀憲 (東京大・院薬・細胞情報)

Room 11 Oct. 7 (Fri.) 8:00-8:50 J

**ML8 Trends in epigenetic drug discovery for anticancer therapy**  
がんエピゲノム創薬の潮流

Chairperson: Masaya Imoto (Fac. of Sci. & Tech., Keio Univ.)  
座長: 井本 正哉 (慶應大・理工)

 Marc Ladanyi (Mol. Diagnostics Service, Dept. of Path. & Human Oncology & Pathogenesis Program, Memorial Sloan Kettering Cancer Ctr.)

Characterization of gene expression profiles had been shown useful to stratify breast cancer in different prognosis tiers. Additionally, recent advent of next-generation sequencers has revealed a number of genetic alterations that play important roles in carcinogenesis. Such information is critical in organizing treatment strategies for a given cancer patient. Thus, high-throughput sequencing of tumor DNA for cancer gene panels has attracted a great deal of attention in clinics, and the potential utility of “liquid biopsy” is currently under scrutiny. Such momentum is further accelerated by the “Precision Medicine Initiative” announcement by President Obama in 2015. In this JCA-AACR symposium, such cutting-edge trials are discussed across different cancer types for different application.

Recent advances in genome engineering technology have provided us powerful tools to examine various aspects of biology, including cancer biology. Especially, the CRISPR (clustered regularly interspaced short palindromic repeat) system has been shown to be a versatile experimental platform for genome engineering that uses a guide RNA to target nucleases or transcriptional modifiers to a specific sequence. Similarly, transposon-mediated genome manipulation is a useful technology for insertional mutagenesis in both loss-of-function and gain-of-function assays. Furthermore, unique forward genetic screens can be performed by the combination of such genome engineering technologies with stem cell technologies. In this session, we will learn cutting-edge researches with the latest genome engineering technologies and discuss the possible applications of such technologies to cancer research.

While a unique metabolic feature of cancers was first described a century ago, cancer metabolism research revisited in the last decade and has explosively developed. Thanks to technological advancement, metabolome has become a standard layer in omics study in addition to genome, transcriptome and proteome. It is now understood that cellular status, such as quiescent or proliferating, immature or differentiated, and apoptotic or senescent, is closely related to various metabolic activities in cells. Cellular status determines metabolic activities, and in turn metabolites dictate cellular status. Piles of studies have described cancer-associated metabolic alterations in combination with their responsible regulatory mechanisms and consequences, which provide better understanding of cancer cell behaviors. This session focuses on the metabolic features of cancers and molecular mechanisms responsible for their establishment and discuss on cancer metabolism as diagnostic and therapeutic targets.

**Precision medicine in breast cancer  
—Current status and future perspective—**

乳がん領域における Precision Medicine -現状と将来展望-

Chairpersons: Seigo Nakamura (Div. of Breast Surg. Oncology, Showa Univ. Sch. of Med.)

Masakazu Toi (Breast Surg., Kyoto Univ. Grad. Sch. of Med.)

座長：中村 清吾（昭和大・医・乳腺外科）  
戸井 雅和（京都大・院医・乳腺外科）**The current approach for breast cancer treatment from the aspect of precision medicine**

In the era of next generation sequencing, we can evaluate tumor characteristics more accurately and select targeted therapies more properly for breast cancer management.

For somatic mutations, several trials of confirming appropriateness of the treatment decision according to the feature of driver mutations are now undergoing.

Germline mutations of *BRCA1* and *BRCA2* genes can cause very high rates of breast and ovarian cancer, so called Hereditary Breast and Ovarian Cancer (HBOC). Management of HBOC family members are, (1) Intensive screening including Breast MRI (2) Risk reducing mastectomy or Risk reducing salpingo-oophorectomy (3) Chemoprevention (Tamoxifen for prevention of breast cancer) Proper option for each subject should be selected according to each view of life or values.

For both somatic and germline mutations, skillful genetic counsellors or geneticists are necessary for breast oncology team.

In the use of exome analysis, we may encounter unexpected rare hereditary disease such as Li-Fraumeni syndrome or Cowden disease or the other common disease other than breast cancers. Therefore, we shouldn't miss them and send them to the proper specialist of each field.

Finally, the future vision of precision medicine or preemptive medicine in the management for breast cancer will be discussed.

Cancer immunotherapy is now facing a new era as illustrated by recent clinical results showing effectiveness of immune-checkpoint blockade and CAR-T therapy. Efforts made in these two decades to improve the efficacy of cancer immunotherapy have revealed various immunosuppressive mechanisms present in cancer patients, including immunosuppressive cellular elements and cytokines milieu in tumor micro-environments. Understanding these mechanisms is essential to further develop effective cancer immunotherapies which are applicable to larger population of cancer patients. This symposium discusses basic aspects of cancer immunotherapy, including targeting tumor-infiltrating regulatory T cells by monoclonal antibody and small molecules, next-generation CAR-T cell therapy, induction of CTLs from iPS cells for tumor-specific CTL therapy, and epigenetic control of anti-tumor immunity.

### Biotherapy of cancer: New antibody therapeutics and oncolytic virus therapy

バイオ医薬品によるがん治療～新規抗体療法とウイルス療法～

Chairpersons: Yasuhiro Matsumura (Div. of Dev. Therap., NCC-EPOC)

Agents categorized in biotherapy contain monoclonal antibodies (mAbs), growth factors, vaccines, oncolytic virus therapies and others. In this symposium, new strategies with new monoclonal antibodies and oncolytic virus therapies made in Japan have been taken up.

Antibody therapeutics have emerged as a viable option in oncological modality. In this symposium, a new mAb specifically reactive with a newly identified protein, antibody drug conjugates (ADCs), and the linker technology will be presented.

Some oncolytic virus therapies have been recently approved in the United State and Europe and some other oncolytic virus therapies are under clinical evaluation. In this context, non-clinical and clinical studies are now underway in Japan as well and some of them will be presented.

### Therapeutic vulnerability in infection/inflammation-associated cancer

感染がん・炎症がんの治療脆弱性を探る

Chairpersons: Masanori Hatakeyama (Div. of Microbiol., Grad. Sch. of Med., The Univ. of Tokyo)  
Masanobu Oshima (Div. of Genetics, Cancer Res. Inst., Kanazawa Univ.)

座長：畠山 昌則 (東京大・医・微生物)  
大島 正伸 (金沢大・がん研・腫瘍遺伝)

Chronic inflammation, caused by a variety of factors, including bacterial, viral, and parasitic infections, predisposes an individual to cancer. It is estimated that approximately 20-25% of all cancer cases are associated with microbial infection. The longer the infection/inflammation persists, the higher the risk of cancer development. Inflammatory microenvironment actively contributes to carcinogenesis by inducing sustained cytokine/chemokine secretion, genome instability, resistance to apoptosis, and stimulation of angiogenesis. All these changes give a selective advantage to cancer-predisposed cells. Animal models have provided experimental evidence for the critical role of inflammation in the development of cancer and have shed lights on the mechanism underlying neoplastic cell transformation. This symposium highlights cutting-edge knowledge on infection/inflammation-associated carcinogenesis, including the role of microbiota in cancer development. In-depth understanding for the molecular mechanisms connecting host immune/inflammatory responses and carcinogenesis should lead to novel approaches to the prevention and treatment of infection/inflammation-associated cancer.

### CS2 Beyond the immune checkpoint blockade

免疫チェックポイント阻害を超えて

Chairpersons: Yutaka Kawakami (Cell. Signaling, Inst. Adv. Med. Res., Keio Univ. Sch. Of Med.)  
Yasuharu Nishimura (Dept. Immunogenet., Grad. Sch. Of Med. Sci., Kumamoto Univ.)

座長：河上 裕 (慶應大・医・先端研 (細胞))  
西村 泰治 (熊本大・院・生命科学・免疫識別)

Immune-checkpoint blockade and T-cell-based adoptive cell therapy have provided an epoch-making breakthrough of the cancer immunotherapy. However, there are still many non-or partial-responders. In this symposium, we will discuss possibility of the new cancer immunotherapy beyond the current immunotherapies. The further understanding of human cancer immunology through analyses of heterogeneity of immune-status and immune-response in tumor microenvironment and peripheral blood by using various omics technology including TCR repertoire analysis [Dr. Nakamura] and genetic analysis of tumors [Dr. Kawakami] will allow us development of personalized combination immunotherapy including use of new cancer vaccines [Dr. Nishimura]. The recent technological advances also made it possible to generate enhanced natural or even artificial anti-tumor T cell responses (neo-antigen-specific TCR [Dr. Tran] or next generation TCR/CAR gene-transduced T cells [Dr. Ikeda and Dr. Chung]) capable of eliminating low-immunogenic human cancer cells which have once evaded from immune-defense. We hope active discussion for development of the next generation cancer immunotherapy beyond current immunotherapies.

Precision medicine for cancer is required to generate genomic and epigenomic profiles of tumor tissues. But taking biopsies to profile or monitor metastases is often difficult for practical reasons, and we have long searched for proxy measurements that would eliminate the need for tumor tissue samples. Thanks to large-scale cancer genome sequencing projects, we now possess catalogs of genetic alterations that are present in a variety of human tumor types, and by capitalizing these information and more innovated technologies, we now can analyze and detect cancer-specific DNA sequences in blood or body fluids as liquid biopsy. In this session, we focus on genomic or epigenomic analyses and diagnosis of cell-free DNA from cancer patients' plasma and body fluids for monitoring and diagnosis, and discuss their advantages and limitation.

**IS8 Non-coding RNA, a new epigenetic regulator in cancer**

Chairpersons: Hiromu Suzuki (Dept. of Mol. Biol., Sapporo Med. Univ.)

Jong-Hoon Park (Dept. of Biol. Sci., Sookmyung Women's Univ.)

It is widely accepted that cancers arise through accumulation of both genetic and epigenetic abnormalities. Recent advances in genome analysis have revealed that a much larger portion of the human genome is transcribed into RNA than previously recognized. Emerging evidences have highlighted the biological and pathological importance of RNA molecules that lack protein-coding potential, those collectively referred to as non-coding RNAs. Non-coding RNAs are generally classified into two categories, small (<200 nt) and large (>200 nt). Dysregulation of both subclasses of non-coding RNA is commonly observed in various types of human malignancies, and it is also deeply involved in the epigenetic alterations. In this session, 6 speakers will present recent studies on the functional interplay between non-coding RNA and epigenetic regulation in cancer. We sincerely hope this international session will be an excellent opportunity for us to learn more about the recent advances in this topic.

本シンポジウムでは、癌研究における優秀な女性科学者の層の拡大を目的として、第一線で活躍中の女性研究者に最先端の癌研究を御発表いただくとともに、女性研究者に関するコメントをお願いしています。男性、女性に限らず御来聴下さい。

Japanese Cancer Association has been making efforts to expand woman researcher populations on cancer research. The ratio of female members of JCA is around 15% of the total, whereas it is >40% in the younger population under 30, suggesting a substantial number of women researchers quit from the research field at 30'-40's. This may be partly attributed to the Japanese conventional concept of the role of women in a family. Nowadays, life styles are changing, and many universities try to pick up woman researchers for a leading position as a policy. In face of such a situation, woman researchers should maintain high quality of science and have the pride of professional, in addition to support from their environments. The purpose of a series of symposium "Women scientists in cancer research" is to introduce high quality of science carried by active woman investigators, enlightening next generation. Six investigators including two selected from applicants for the symposium will present their scientific achievements, and also place some comments on woman researchers. We thank Prof. Hara for accepting our invitation, and like to have his valuable comments at the end of this symposium.

**New development of pathological diagnosis for personalized medicine**

個別化がん治療における病理診断—新展開

Chairpersons: Wataru Yasui (Dept. of Mol. Pathol., Hiroshima Univ.)

In the Era of personalized medicine, the importance of molecular pathological diagnosis has been increasingly growing. Recent advancements in high-throughput analysis including NGS have greatly contributed to the identification of novel biomarkers and potential therapeutic targets. Dr. Ishikawa will introduce recent progress in genomic pathology and therapeutic targets of gastric cancer. Dr. Ikehara will describe biomarker research through glyco-proteomics. Dr. Hirota will present the trail of pathological investigation of GIST to molecular target therapy. Dr. Nakazawa will describe molecular pathological diagnosis for devising a treatment strategy in pediatric solid tumors. Dr. Kanai will introduce the importance of standardization of tissue sample handling for genomic research. Dr. Ochiai will describe the present and future of companion diagnosis and stress the importance of role of molecular pathologist. It is hope that the idea of development of new diagnostics and therapeutics, quality control, handling samples, translation of analytical results to clinics will be deepened. This symposium is hold in collaboration with the Japanese Society of Pathology.

### Context-dependent TGF- $\beta$ signaling and tumor progression コンテキスト依存的な TGF- $\beta$ シグナルとがん悪性化

Chairpersons: Keiji Miyazawa (Dept. of Biochem., Univ. of Yamanashi, Sch. of Med.)

Mitsuyasu Kato (Dept. of Exp.Path., Univ. of Tsukuba)

座長：宮澤 恵二 (山梨大・医・生化学)

加藤 光保 (筑波大・医・実験病理)

Transforming growth factor- $\beta$  (TGF- $\beta$ ) was first identified as a peptide that promotes transformation and anchorage-independent growth of normal fibroblasts. Subsequently TGF- $\beta$  was found to inhibit proliferation of epithelial cells and thereafter regarded as a tumor suppressor. Now it is widely accepted that TGF- $\beta$  has two opposite faces on tumorigenesis. Importantly, TGF- $\beta$  can affect not only tumor cells but also normal stromal cells in the tumor microenvironment, including endothelial, fibroblastic, and immune inflammatory cells, thus modulating tumor progression positively or negatively. Recent findings also indicated that, in addition to the Smad signaling pathway, TGF- $\beta$  transmits signals via non-canonical Smad signaling pathways and Smad-independent signaling pathways. In this session, we discuss recent progress in elucidating molecular basis for context-dependent TGF- $\beta$  signaling in tumor progression and therapeutic approaches that target pathological TGF- $\beta$  signaling.

### Advances in cancer animal models: From mechanisms to clinical output

がん動物モデルの新展開：メカニズムから臨床応用まで

Chairpersons: Takuro Nakamura (Div. of Carcinogenesis, Cancer Inst., JFCR)

Akira Suzuki (Div. of Mol. Cell. Biol., Kobe Univ. Grad. Sch. of Med./Div. of Cancer Genetics, Med. Inst. of Bioregulation, Kyushu Univ.)

鈴木 聡 (神戸大・院医・分子細胞生物学/九州大・生医研・ゲノム腫瘍)

The generation of clinically relevant animal models for human cancers is important both for understanding the nature of tumorigenesis and for developing novel therapeutics. Although genetic mutations and epigenetic alterations of precursor cells are undoubtedly important for oncogenesis, their specific roles in malignant phenotypes and the effects of the tumor microenvironment largely remain to be examined. This symposium features the insights of six investigators who have focused on defining the biological characteristics of various cancer types using innovative animal models. Most of these models have been created by introducing cancer-causing genes into mice, with special attention paid to accurately recapitulating characteristics of the human disease *in vivo*. The significance of cancer-stromal cell interaction, cancer cell metabolism, and cell non-autonomous effects will also be highlighted. The symposium will conclude with a presentation on genome editing and CTOS technology that should provide useful information to the audience. Our objective with this symposium is to showcase animal models that can further the goals of cancer researchers in many fields, from basic biology studies to drug development.

Cancers hijack various developmental processes such as cell proliferation, cell polarity disruption, EMT, cell invasion, cell migration, and cellular dedifferentiation. In addition, cancers are affected by senescent processes including oncogene-induced senescence and the senescence-associated secretory phenotype (SASP). In this symposium, we will introduce several recent studies trying to understand cancer development and progression through the processes of animal development and senescence, and discuss the underlying mechanisms, common principles, and therapeutic strategies.

### P2-1 Gene-manipulated animal models (1) 遺伝子操作動物モデル (1)

Chairperson: Mitsuru Futakuchi (Dept. of Mol Tox, Nagoya-City Univ. Med.)  
座長: 二口 充 (名古屋大・院医・分子毒性)

**P-2001 B6-Ryr<sup>2miNobs</sup> and A/J-Ryr<sup>2miNobs</sup> mice as tools for exploring modifier genes in K-rasG12V driven lung tumorigenesis.**  
Hiromitsu Saito, Noboru Suzuki (Dept. Animal Genomics, Mie Univ., Life Sci. Res. Ctr.)

遺伝子改変肺発癌モデルマウスによる癌型 K-ras 変異依存的な発癌感受性遺伝子の探索  
齋藤 浩充、鈴木 昇 (三重大・生命セ・動物機能ゲノミクス)

**P-2002 Aberrant thrombocytosis observed in transgenic mouse with liver-specific BRAFV600E expression**  
Hiroki Tanaka<sup>1</sup>, Masahiro Yamamoto<sup>2</sup>, Masaru Asari<sup>1</sup>, Katsuhiro Okuda<sup>1</sup>, Meiji Ohtani<sup>1</sup>, Kousuke Yamazaki<sup>3</sup>, Shimizu Keiko<sup>1</sup>, Katsuhiro Ogawa<sup>1</sup> (<sup>1</sup>Dept. Legal Med., Asahikawa Med. Univ., <sup>2</sup>Dept. Pathol., Asahikawa Med. Univ., <sup>3</sup>Clin. Med., Japanese Red Cross Hokkaido College Nurs.)

肝特異的 BRAFV600E 発現マウスでみられた異常血小板増加症  
田中 宏樹<sup>1</sup>、山本 雅大<sup>2</sup>、浅利 優<sup>1</sup>、奥田 勝博<sup>1</sup>、大谷 静治<sup>1</sup>、山崎 弘資<sup>3</sup>、清水 恵子<sup>1</sup>、小川 勝洋<sup>1</sup> (<sup>1</sup>旭川医大・法医、<sup>2</sup>旭川医大・法医、<sup>3</sup>日本赤十字看護大・臨床医学)

**P-2003 Transposon mutagenesis identifies genes and cellular processes driving EMT in HCC**  
Takahiro Kodama, Tetsuo Takehara (Dept. Gastroenterology and Hepatology, Osaka Univ. Grad. Sch. Med.)

In vivo におけるトランスポゾン無作為挿入変異法を用いた肝細胞癌の上皮間葉転換に関わる遺伝子の網羅的同定  
小玉 尚宏、竹原 徹郎 (大阪大学大学院医学系研究科消化器内科学)

**P-2004 Role of Deiodinase, Iodothyronine, Type II in Colon Tumorigenesis**  
Yasushi Kojima<sup>1</sup>, Yuriko Kondo<sup>1</sup>, Teruaki Fujishita<sup>1</sup>, Rie Kajino<sup>1</sup>, Makoto M. Taketo<sup>2</sup>, Masahiro Aoki<sup>1</sup> (<sup>1</sup>Div. Mol. Pathol., Aichi Cancer Center Res. Inst., <sup>2</sup>Dpt. Pharmacol., Kyoto Univ. Grad. Sch.)

小島 康<sup>1</sup>、今度 ゆり子<sup>1</sup>、藤下 晃章<sup>1</sup>、梶野 リ工<sup>1</sup>、武藤 誠<sup>2</sup>、青木 正博<sup>1</sup> (<sup>1</sup>愛知県がんセンター研究所・分子病態学部、<sup>2</sup>京都大・医・遺伝薬理学)

**P-2005 Establishment of a novel mouse line carrying a conditional knockin allele of cancer-associated FBXW7 mutation**  
Tsunao Ikenoue<sup>1</sup>, Yumi Terakado<sup>1</sup>, Tomoaki Fujii<sup>2</sup>, Daisuke Matsubara<sup>3</sup>, Kiyoshi Yamaguchi<sup>1</sup>, Yoichi Furukawa<sup>1</sup> (<sup>1</sup>Div. Clin. Genome Res., Inst. Med. Sci., Univ. Tokyo, <sup>2</sup>Dept. Cancer Genome Res, Sasaki Inst, Sasaki Foundation, <sup>3</sup>Dept. Integrative Pathol.)

癌で高頻度に見られる FBXW7 変異の条件的ノックインマウスの樹立  
池上 恒雄<sup>1</sup>、寺門 侑美<sup>1</sup>、藤井 智明<sup>2</sup>、松原 大祐<sup>3</sup>、山口 貴世志<sup>1</sup>、古川 洋一<sup>1</sup> (<sup>1</sup>東京大・医科研・臨床ゲノム腫瘍学、<sup>2</sup>佐々木研究所・臨床ゲノム学系、<sup>3</sup>自治医大・統合病理学)

**P-2006 Oxidative stress boosts intestinal tumor incidence and a unique mutational signature in Mutyh deficient mice**  
Mizuki Ohno<sup>1</sup>, Noriko Takano<sup>1</sup>, Yoshimichi Nakatsu<sup>1</sup>, Yusaku Nakabeppu<sup>2</sup>, Teruhisa Tsuzuki<sup>1</sup> (<sup>1</sup>Dep. Med. Biophys. Radiat. Biol., Med. Sci., Kyushu Univ., <sup>2</sup>Dev. Nonfunctional Genomics, Med. Inst. Bioreg., Kyushu Univ.)

酸化ストレスによる消化管腫瘍発生頻度上昇と特異的体細胞変異シグニチャー: Mutyh 欠損マウスを用いた解析  
大野 みずき<sup>1</sup>、鷹野 典子<sup>1</sup>、中津 可道<sup>1</sup>、中別府 雄作<sup>2</sup>、續 輝久<sup>1</sup> (<sup>1</sup>九大・医学研究院・基礎放射線医学分野、<sup>2</sup>九大・生医研・脳機能)

**P-2007 Notch1-activated mature B cells suppress cellular immunity in mice**  
Hiroshi Arima, Momoko Nishikori, Yasuyuki Otsuka, Wataru Kishimoto, Kotaro Shirakawa, Akifumi Takaori-Kondo (Dept. Hematol/Oncol., Kyoto Univ.)

Notch1 シグナル活性化 B 細胞は細胞性免疫を抑制する  
有馬 浩史、錦織 桃子、大塚 泰幸、岸本 渉、白川 康太郎、高折 晃史 (京都大学 血液・腫瘍内科)

## Survivor Scientist Program

サバイバー・科学者 プログラム

Chairperson: Tetsuo Noda (Japanese Foundation for Cancer Res.)

座長：野田 哲生 (がん研・研)

JCA is now launching JCA-Survivor Scientist Program (JCA-SSP) by following AACR (American Association for Cancer Research)-SSP, an attractive program to provide a training opportunity for survivors who wish to support cancer research. This program is planned to facilitate collaboration between scientists, cancer survivors and patient advocacy groups, which is essential to promote cancer research in our society. In AACR, Dr. Anna Baker and Dr. Margaret Foti initiated the first ever SSP with 25 participants who were patient advocates in 1999. Now, the door is open for a wide variety of international advocates from Europe, Africa, South America, Asia including Japan. In this JCA-SSP program, we plan to invite ca. 10 participants who will learn about cancer research and its relevance to cancer therapeutics now and future. Scientists and patient advocates who have experienced AACR-SSP will also join this program as advocate mentors to assist participants throughout this 3 days program. Participants are requested to present their current activities and expectations for cancer research by poster presentation and the results of their group work will be presented at the end of this program.
